

Systech's Solutions: Providing OEE Visibility in Real-time for Actionable Intelligence (where it matters most)

Achieving a strong OEE rating is an excellent indicator, but continually optimizing line performance is paramount. Continuous line monitoring and control is the only way to stop inefficiencies *before* they happen. Long before a problem shows itself in the OEE analysis, it happens on the packaging line.

With Systech Advisor® OEE, manufacturers access in-depth information on Availability, Performance and Quality of the equipment helping them identify and isolate production problems and apply a solution. By illuminating the sources and causes of downtime, pinpointing production bottlenecks, and identifying quality issues, Advisor OEE arms organizations with the information needed to proactively determine measures to improve their packaging process.

The result: complete insight into the factors impacting production, and the actionable knowledge required to realize peak efficiency.

Features and Benefits

- Advisor OEE integrates seamlessly with existing plant automation devices, saving on the costs of additional hardware and lower integration time.
- An extensible application of Systech Advisor®-- a robust, high performance packaging line automation and information management solution that addresses recipe management, change-over times, serialization, custom reports, and communication with business systems.
- Analyses and displays Asset Utilization data, uptime and downtime, MTTR and MTBF to help plant personnel schedule maintenance plan and avoid unscheduled shutdowns.
- Provides Line, Lot, Machine reports by Lot and Line, helping management obtain in-depth information about entire packaging process.
- Ease of use enables the plant personnel to operate with minimal training.

Its comprehensive, reliable system is easy to establish, expand and manage over time and is unparalleled in delivering significant improvements at the line and plant levels.

If you are interested in improving your packaging operations please contact a Systech representative at 1-800-847-7123. If you are currently a Systech Advisor customer, Advisor OEE can be implemented with simple software upgrade.
