SYSTECH International Opens New European Office In Paris

SYSTECH to Support Growing European Market With a Comprehensive Range of Packaging Performance Management Solutions

Cranbury, New Jersey, March 31, 2005 – SYSTECH International, the leading provider of Packaging Performance Management Solutions for Manufacturing Operations, today announced the opening of a new office in France to support their European headquarters in Hull, England.

The dramatic rise in market demand driven by regulatory requirements, such as tracking vignettes, cGMP, GAMP, and 21 CFR Part 11, has resulted in brisk growth throughout Europe. According to Robert DeJean, President and CEO of SYSTECH, “SYSTECH’s comprehensive suite of Packaging Performance Management solutions was developed specifically to meet the needs of inspection, control, and information management in packaging environments. Our expertise in these areas enables manufacturers throughout Europe to raise the standards for quality, compliance, productivity, and risk management. In order to maintain support for our growing number of European clients, we have recently established a regional office in Paris, France.”

SYSTECH continues to grow its network of regional offices throughout Europe and plans to announce additional locations during the year. “We have seen an enormous demand for automation and inspection solutions across the continent. SYSTECH’s incomparable packaging line intelligence and procedural control capabilities continues to drive our growth. We are delighted to increase support for our French clients,” said Gary Palmer, Director of Sales, Europe. Jamy Michel, Sales Manager, France and Belgium adds, “SYSTECH has chosen an opportune time to establish a sales office in France as significant developments in the pharmaceutical sector in Europe has fueled demand for solutions to overcome current and future challenges.”

For over twenty years, SYSTECH has helped manufacturers take full control of their packaging lines with TIPS SENTRI™ and TIPS ADVISOR™ - robust, high performance solutions that improve productivity and product quality by automating the setup, control, inspection, monitoring and information management of the packaging process, from set-up to cleanup.
