SYSTECH International Opens New European Headquarters

Expansion To Support Growing European Customer Base

Cranbury, New Jersey, October 11, 2005 – SYSTECH International, the leading provider of Packaging Performance Management solutions for manufacturing operations, announced that it has moved its European headquarters in Hull, United Kingdom. Twice the size of its previous facility, the new location will better support its European customer base with comprehensive engineering and demonstration capabilities.

“Increased demand in our Packaging Performance Management solutions in Europe has been a key driver for expansion,” said SYSTECH’s CEO Robert DeJean. “The new facility enables us to better support the European market.”

“We have seen tremendous growth in the U.K., Ireland, and across continental Europe over the last few years,” noted Gary Palmer, SYSTECH’s Director of Sales, Europe. “Increased regulatory and operational challenges faced by the packaging community will continue to fuel interest in our solutions. The new facility will allow us to focus our sales and engineering efforts and further strengthen our commitment to our European customers.”

In addition to the new European headquarters in Hull, SYSTECH International has a worldwide headquarters in Cranbury, New Jersey and numerous regional offices in North American and continental Europe.

About SYSTECH International

SYSTECH International is the leading provider of Packaging Performance Management solutions for manufacturing operations. Founded in 1985, its TIPS® family of solutions was developed specifically to meet the needs of inspection, control, and information management in packaging environments. A recognized market leader in the Pharmaceutical, Medical Device, Biotechnology, and Healthcare industries, SYSTECH is rapidly gaining market leadership in the Food and Beverage industry. While focused on highly regulated industries, the company also services other packaging and converting industries including Printing, Cosmetics, Consumer Products, Automotive, and Electronics.
