## **SYSTECH International Introduces On-Line RSS Bar Code Grading Capability To Its Vision Inspection Solutions**

### **Aiding FDA 21 CFR Part 201 Bar Code Labeling Requirements for Human Drug and Biological Products**

**Cranbury, New Jersey, March 31, 2005** – SYSTECH International, the leading provider of Packaging Performance Management Solutions for Manufacturing Operations, today announced On-Line RSS Bar Code Grading capabilities in its TIPS SENTRI™ machine vision inspection solutions.

New controls placed on the Pharmaceutical, Medical Device, Biotech, and Healthcare industries for product identification safeguards have resulted in an extraordinary rise in demand for RSS Bar Code Grading functionality in inspection solutions. “With the introduction of RSS Bar Code Grading to our SENTRI product line, we are able to offer manufacturers state-of-the-art inspection system calibration,” noted Robert DeJean, President and CEO of SYSTECH. “It’s easy to use and truly conforms to ISO/IEC-15416 and 15426-1 requirements. It also provides accurate reflectance and dimensional measurements and is calibrated to NIST-traceable references.”

With its ultra high performance, SENTRI’s RSS Bar Code Grading does not impact packaging line speeds and offers the ability to run additional applications such as lot and date code verification, component code verification, label placement and alignment, cap closure and alignment, and print quality verification. SENTRI supports the most diverse range of digitally controlled cameras on the market – guaranteeing all application requirements are easily met. SYSTECH’s comprehensive line of vision inspection solutions is based upon industry standard technologies and operates on the Intel®/Microsoft® platform – ensuring long-term support and no risk of technology obsolescence.

For over twenty years, SYSTECH has helped manufacturers take full control of their packaging lines with TIPS SENTRI™ and TIPS ADVISOR™ - robust, high performance solutions that improve productivity and product quality by automating the setup, control, inspection, monitoring and information management of the packaging process, from set-up to cleanup.
