SYSTECH International Releases TIPS® 7.0 Operating System

New Operating System To Extend Capabilities Across Its Packaging Performance Management Solutions

Cranbury, NJ, May 15, 2006 – SYSTECH International, the leading provider of Packaging Performance Management solutions for manufacturing operations, today announced the release of its TIPS® System Software version 7.0 on the Microsoft® Windows® XP Embedded Platform.

Powerful and highly scalable, TIPS® System Software provides maximum performance for mission-critical applications and facilitates a real-time global view of the packaging line. Its standards-based architecture is designed to work seamlessly with other systems and equipment and allows users to leverage existing technology investments.

“TIPS® 7.0 reaffirms SYSTECH’s commitment to deliver world-class packaging performance management solutions to its customers,” said Robert DeJean, SYSTECH’s President and CEO. “The new operating system offers performance and memory management optimization without changing the look and feel of previous systems. Customers will benefit from its enhanced bar code grading and case content capabilities, as well as simplified maintenance procedures. Future releases will support SYSTECH’s next generation vision and line automation functionality.”

TIPS® 7.0 is part of SYSTECH International’s comprehensive suite of inspection, packaging line automation and information management solutions.

About SYSTECH International

SYSTECH International is the leading provider of Packaging Performance Management solutions for manufacturing operations. Founded in 1985, its TIPS® family of solutions was developed specifically to meet the needs of inspection, control, and information management in packaging environments. As recognized market leader in highly regulated industries such as Pharmaceutical, Medical Device, Biotechnology, and Healthcare, the company also services other packaging and converting industries.
